

### *Amendments*

In accordance with 37 CFR §1.121, please amend the above-identified application as set forth below.

#### *Amendments to the Claims:*

Please amend the claims as set forth below.

1. (Currently Amended) A seat cushion, that includes polyurethane, comprising:  
at least one polyurethane gel compound based on reaction products of polyols and polyisocyanates as a first material; and  
at least one polyurethane foam as a second material wherein said at least one polyurethane gel and said at least one polyurethane foam are joined by adhesion during curing of ~~one of said gel or~~ and said foam in a single mold;  
and wherein said at least one polyurethane gel is made from a reaction mixture including:  
one or more polyisocyanates; and  
a mixture of a first polyol component including one or more polyols having hydroxyl numbers below 112; and a second polyol component that includes one or more polyols having hydroxyl numbers in a range between 112 to 600; with a weight ratio of said first polyol component to said second polyol component between 90:10 and 10:90;  
wherein the product of the functionalities of the polyurethane-forming components is at least 5.2 and the isocyanate index lies between 15 and 60; and  
wherein the materials are a seat cushion.
2. (Previously Presented) A seat cushion according to claim 1, wherein said molding includes an outer covering layer which is impermeable.
3. (Previously Presented) A seat cushion according to claim 1, wherein said molding includes an outer covering layer which is impermeable to said polyurethane gel.

4. (Previously Presented) A seat cushion according to claim 3, wherein said polyurethane foam and said polyurethane gel are arranged in at least two layers, one above another.

5. (Previously Presented) A seat cushion according to claim 4, wherein said polyurethane gel layer is partially surrounded by said polyurethane foam.

6. (Previously Presented) A seat cushion according to claim 1, wherein a block of said polyurethane foam is at least partially surrounded by said polyurethane gel.

7. (Previously Presented) A seat cushion according to claim 2, wherein said covering layer includes a film.

8. (Previously Presented) A seat cushion according to claim 2, wherein said covering layer includes a polyurethane film.

9. (Previously Presented) A seat cushion according to claim 2, wherein said covering layer includes a polyvinyl chloride film.

10. (Previously Presented) A seat cushion according to claim 2, wherein said covering layer includes a leather film.

11. (Previously Presented) A seat cushion according to claim 2, wherein said covering layer includes a micro-fiber material film.

12. (Previously Presented) A seat cushion according to claim 1, wherein said molding is a seat cushion.

13. (Previously Presented) A seat cushion according to claim 12, wherein a textile cover layer is located adjacent to said seat cushion.

14. - 38. (Cancelled)

39. (Previously Presented) A seat cushion according to claim 2, wherein the outer covering layer is pre-formed in a mold.

40. (Previously Presented) A seat cushion according to claim 4, wherein the polyurethane foam layer is in direct contact with the outer covering layer.

41. (Previously Presented) A seat cushion according to claim 4, wherein the polyurethane gel layer is in direct contact with the outer covering layer.

42. (Previously Presented) A seat cushion according to claim 1, wherein the polyurethane gel is pre-formed.

43. (Previously Presented) A seat cushion according to claim 4, wherein the polyurethane gel layer is pre-formed.

44. (Previously Presented) A seat cushion according to claim 4, wherein the polyurethane gel layer is in pre-formed sections.

45. (Previously Presented) A seat cushion according to claim 1, wherein the polyurethane gel is produced from raw materials where the product of the isocyanate functionality and the functionality of the polyol component is at least 5.2.

46. (Previously Presented) A seat cushion according to claim 1, wherein the polyurethane gel is produced from raw materials where the product of the isocyanate functionality and the functionality of the polyol component is at least 6.5.

47. (Previously Presented) A seat cushion according to claim 1, wherein the polyurethane gel is produced from raw materials where the product of the isocyanate functionality and the functionality of the polyol component is at least 7.5.

48. (Previously Presented) A seat cushion according to claim 1, wherein the polyurethane gel is produced by a reaction mixture of an isocyanate and a polyol component having a mixture of:

one or more polyols having hydroxyl numbers below 112;

one or more polyols having hydroxyl numbers in a range 112 to 600, wherein a weight ratio of the one or more polyols having hydroxyl numbers below 112 to the one or more polyols having hydroxyl numbers in a range 112 to 600 lies between 90:10 and 10:90;

the isocyanate index of the reaction mixture lies in a range from 15 to 59.81; and

the product of isocyanate functionality and functionality of the polyol component is at least 6.15.

49. (Cancelled)

50. (Previously Presented) A seat cushion according to claim 48, wherein the reaction mixture further includes a catalyst.

51. (Previously Presented) A seat cushion according to claim 48, wherein the reaction mixture includes fillers.

52. (Cancelled)

53. (Previously Presented) A seat cushion according to claim 51, wherein the isocyanates for producing the polyurethane gel are of the formula

where n represents 2 to 4 and Q denotes an aliphatic hydrocarbon radical having 6 to 18 C atoms.

54. (Previously Presented) A seat cushion according to claim 51, wherein the isocyanates for producing the polyurethane gel are of the formula

where n represents 2 to 4 and Q denotes an cycloaliphatic hydrocarbon radical having 4 to 15 C atoms.

55. (Previously Presented) A seat cushion according to claim 51, wherein the isocyanates for producing the polyurethane gel are of the formula

where n represents 2 to 4 and Q denotes an aromatic hydrocarbon radical having 6 to 15 C atoms.

56. (Previously Presented) A seat cushion according to claim 51, wherein the isocyanates for producing the polyurethane gel are of the formula

where n represents 2 to 4 and Q denotes an araliphatic hydrocarbon radical having 8 to 15 C atoms.

57. (Previously Presented) A seat cushion according to claim 53, wherein the isocyanates for producing the polyurethane gel are in pure form.

58. (Previously Presented) A seat cushion according to claim 53, wherein the isocyanates for producing the polyurethane gel have conventional isocyanate modifications.

59. (Previously Presented) A seat cushion according to claim 58, wherein the conventional isocyanate modification includes urethanisation.

60. (Previously Presented) A seat cushion according to claim 58, wherein the conventional isocyanate modification includes allophantisiation.

61. (Previously Presented) A seat cushion according to claim 58, wherein the conventional isocyanate modification includes biuretisation.

62. (Currently Amended) A seat cushion, that includes polyurethane, comprising:  
at least one unfoamed polyurethane gel compound based on reaction products of polyols and polyisocyanates as a first material; and  
at least one polyurethane foam as a second material wherein said at least one polyurethane gel and said at least one polyurethane foam are joined by implicit ~~adhesive~~ adhesion during curing of ~~one of said gel or~~ and said foam in a single mold;  
and wherein said at least one polyurethane gel is made from a reaction mixture including:  
one or more polyisocyanates; and  
a mixture of a first polyol component including one or more polyols having a molecular weight between 1,000 and 12,000 and an OH-number between 20 and 112; and a second polyol component that includes one or more polyols having hydroxyl numbers in a range between 112 to 600; with a weight ratio of said first polyol component to said second polyol component between 90:10 and 10:90;  
wherein the product of the functionalities of the polyurethane-forming components is at least 5.2 and the isocyanate index lies between 15 and 60; and  
wherein the materials are a seat cushion.

63. (Previously Presented) A seat cushion, that includes polyurethane, comprising:  
at least one polyurethane gel compounded based on a reaction products of polyols and polyisocyanates as a first material; and  
at least one polyurethane foam as a second material wherein said at least one polyurethane gel and said at least one polyurethane foam are joined when a reaction mixture of a polyurethane gel composition and foamable polyurethane are joined either when, a polyurethane raw material mixture for producing of foam is foamed and cured in a mold with a preformed gel layer introduced therein, or when a polyurethane gel is cured in a mold with a pre-formed foam block placed therein;  
and wherein said at least one polyurethane gel is made from a reaction mixture including:

one or more polyisocyanates; and

a polyol component consisting of one or more polyols having a molecular weight between 1,000 and 12,000 and an OH-number between 20 and 112 or a mixture of a first polyol component including one or more polyols having hydroxyl numbers below 112; and a second polyol component that includes one or more polyols having hydroxyl numbers in a range between 112 to 600; with a weight ratio of said first polyol component to said second polyol component between 90:10 and 10:90;

wherein the product of the functionalities of the polyurethane-forming components is at least 5.2 and the isocyanate index lies between 15 and 60; and

wherein the materials are a seat cushion.

64. (Previously Presented) The seat cushion of claim 1 further comprising a fabric bonded to said polyurethane gel opposite said polyurethane foam.

65. (Previously Presented) The seat cushion of claim 1 wherein said at least one polyurethane gel is a gel layer at least partially surrounded by said polyurethane foam.

66. (Previously Presented) The seat cushion of claim 1 wherein said at least one polyurethane foam is a foam layer at least partially surrounded by said polyurethane gel.

67. (Currently Amended) The seat cushion of claim 63 wherein said at least one polyurethane gel is a gel layer at least partially surrounded by said polyurethane foam.

68. (Previously Presented) The seat cushion of claim 63 wherein said at least one polyurethane foam is a foam layer at least partially surrounded by said polyurethane gel.

69. (New) A seat cushion, that includes polyurethane, comprising:  
at least one polyurethane gel compound based on reaction products of polyols and polyisocyanates as a first material; and

at least one polyurethane foam as a second material wherein said at least one polyurethane gel and said at least one polyurethane foam are joined when a reaction mixture of a polyurethane gel composition and foamable polyurethane are joined either when, a polyurethane raw material mixture for producing of foam is foamed and cured in a single mold with a preformed gel layer introduced to said one mold, or when a polyurethane gel is cured in a single mold with a foam or pre-formed foam block placed in said one mold;

and wherein said at least one polyurethane gel is made from a reaction mixture including:  
one or more polyisocyanates; and

either a mixture of a first polyol component including one or more polyols having hydroxyl numbers below 112; and a second polyol component that includes one or more polyols having hydroxyl numbers in a range between 112 to 600; with a weight ratio of said first polyol component to said second polyol component between 90:10 and 10:90; or one or more polyols having a molecular weight between 1,000 and 12,000 and an OH number between 20 and 112;

wherein the product of the functionalities of the polyurethane-forming components is at least 5.2 and the isocyanate index lies between 15 and 60; and

wherein the materials are a seat cushion.
